Should I switch?

Simulated demo household. Mailers are estimates, not offers: only quotes with the same dwelling coverage, deductible and wind/hail % are real comparisons (comparable = yes).

$6,480	$2,096	$4,384	67.7%	5	51
Current premium	Best comparable quote	Annual savings	Savings %	Comparable quotes	Days to renewal

Annual premium by insurer

Annual premium by carrier and Comparable?

Quotes vs current policy

Insurer	Premium	Per $1k A	Dwelling (A)	Deductible	Wind/hail	Comparable?	vs current	Why not cor
Ashgrove Sentinel Insurance	$2,096	$4.09	$512,000	$1,000	2.0%	yes	-$4,384	
Corbelleon Insurance	$4,111	$8.55	$480,900	$1,000	1.0%	no	-$2,369	dwelling diff
Current insurer (simulated)	$6,480	$12.66	$512,000	$1,000	2.0%	baseline		
Kestrelite Mutual Insurance	$3,098	$6.05	$512,000	$1,000	2.0%	yes	-$3,382	
Marlowcrest Insurance Group	$4,620	$9.02	$512,000	$1,000	2.0%	yes	-$1,860	
Pennvera Assurance	$3,834	$7.18	$534,000	$1,000	5.0%	no	-$2,646	wind/hail 5%
Quarrypoint Insurance	$3,276	$6.40	$512,000	$1,000	2.0%	yes	-$3,204	
Tidewell Prairie Mutual	$2,234	$4.36	$512,000	$1,000	2.0%	yes	-$4,246	
Wrenfield Haven Insurance	$4,197	$8.41	$499,000	$1,000	1.0%	no	-$2,283	wind/hail 1%

Operations: is extraction trustworthy?

Synthetic benchmark with exact answers. 'test' = the two layouts no model saw in training. Silent errors = wrong values that no review rule flagged.

Extraction method

Why values were sent to review

Flagged fields by Reason

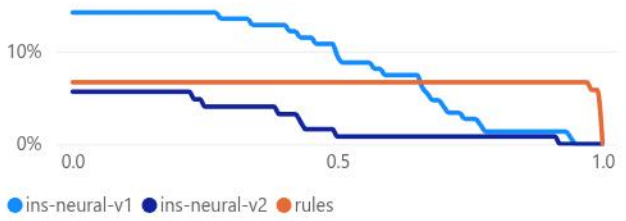

Review load vs cutoff (all methods, + rules)

Share sent to review by threshold and method

Silent errors vs cutoff (all methods, + rules)

Silent error rate by threshold and method

Operations: review feedback & drift

Simulated reviewer, real benchmark outcomes, replaying the project's history: rules (week of Oct 12) → custom model v1 (Oct 19) → v2 augmented (Oct 26). Watch 'not on document' spike with v1 (made-up values) and fall with v2. Source 'app' = live decisions from the Power Apps queue.

Letter	Field	Open (days)
S063	Medical payments (Coverage F)	7.5
S053	Annual premium (total)	7.0
S064	Personal liability (Coverage E)	6.9
Total		**7.5**

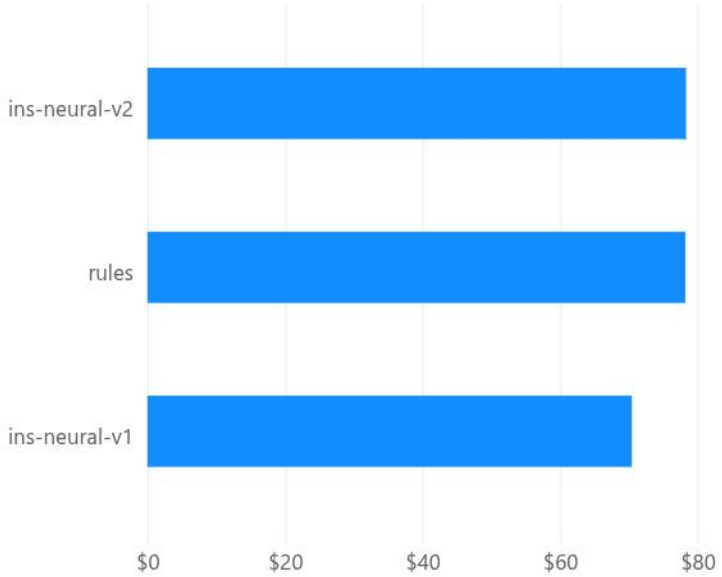

Finance: what does it cost, what does it save?

Cards: whole benchmark run (all methods). Labor $ avoided = (hours to key every document by hand − hours reviewing flagged fields) × analyst rate − extraction cost. Assumptions below.

144	$2.40	$0.0167	14.40	0.77	$475
Documents	Extraction cost	Cost per document	Manual hours (all by hand)	Review hours (pipeline)	Labor $ avoided

Labor $ avoided per method (same 24 unseen-layout docs)

Labor $ avoided by Method

Assumptions (edit in build_dashboard_tables.py)

Assumption	Value	Unit	Source / note
analyst_cost_per_hour	35.00	USD/hour	loaded hourly cost of an operations analyst
manual_minutes_per_doc	6.00	minutes	analyst keys ~10 fields from one letter by hand
price_custom_per_page	0.03	USD/page	Document Intelligence S0 custom extraction (~$30 per 1,000 pag
price_layout_per_page	0.01	USD/page	Document Intelligence S0 prebuilt layout (~$10 per 1,000 pages);
price_llm_per_doc	0.00	USD/doc	gpt-4.1-mini, ~2k tokens per document if an LLM arm is used
review_minutes_per_field	0.50	minutes	confirming one flagged field in the review app
